Chelsea Bray
Class of 2025

Traumatic Brain Injury: When the Brain’s Innate Defense Becomes a Dysfunctional Offense

Tuesday, August 16, 2022
12PM

Introduced by:
Jonathan Godbout, PhD
Professor of Neuroscience, Faculty Director of the Chronic Brain Injury Program, and Assistant Director for Basic Science in the Institute for Behavioral Medicine Research

This talk is co-sponsored by the Chronic Brain Injury Program at The Ohio State University.

Chelsea Bray is a first-generation college and medical student from Cincinnati, OH and graduated with a B.S. in Neuroscience and minor in clinical psychology from OSU in 2018. Chelsea is a certified "Leslie Knope," so in her spare time, she can typically be found doing community work and/or assisting the Godbout Lab with research as an auxiliary member. Chelsea has career interests in med-peds and neurology.

Chelsea’s talk will cover traumatic brain injuries and why we should care about it from a broad lens. She will then dive deeper into neuroimmune interactions and how these are affecting individuals who are surviving years after their injuries. Importantly, she will highlight historic and current research in the field.
