“TBI Polytrauma: Impact on Systemic Immune Response”

Eric A. Sribnick, MD, PhD | Pediatric Neurosurgeon | Nationwide Children's Hospital

In his presentation, Dr. Sribnick will discuss how Traumatic brain injury with external injuries (TBI polytrauma) may be more prone to cause post-injury systemic immune suppression and in-hospital infections. Why is this happening, why should we care, and what can we potentially do to treat it?

1 CME available

This presentation will be offered via Zoom, with optional in-person group viewing (max 40 registrants) in Biomedical Research Tower, Rm 105. Please indicate your preference for attendance when registering. Coffee and bagels will be available for in-person viewers.
